

Create Subset Parts

INTRODUCTION

A Subset Part can be created by specifying node and/or element label ranges of a model part. Subset Parts can only be created from model parts that have node and/or element labels. The Subset Part feature can be used to isolate specified nodal and element regions of interest in large data sets.

BASIC OPERATION

1. First, click the Subset Parts creation icon.
2. Now, for each parent model part, enter the part number of the desired parent part in the Add field and press return.
3. Select Elements (or Nodes) to Show.

4. Enter the element (or node) label range(s) in the Show List text field (ranges are separated by commas).
5. Click Create
